- **Site Acquisition**
- **Permitting**
- **Title Verification**
- **Route Selection**
- **Data Management**

Our Right-of-Way team has experience with both rural and urban environments in all aspects of a project including acquiring easements, settling surface damages, determining ownership, acquiring all necessary permits, and route selection. These skills help determine the best approach to complete each project in the most timely and cost effective manner. Agents use advanced reporting systems to coordinate with survey and mapping personnel to ensure all information is reflected accurately. Also, by determining ownership quickly agents can then use their knowledge and professionalism to negotiate with each landowner efficiently. From the initial project startup to the completion, we strive to satisfy the client's needs and requirements.
